

Log4j vulnerability detection project solution

Instructions: List the steps you will perform to complete each activity in the system. Also, remember to provide screenshots for each step. As a sample, we have filled in the information for Activity 1, Steps 1 and 2. You can add more rows as required.

Task 1/2: Create a rule to detect Log4j vulnerability from a template.

Activity #	Steps
Activity 1: Install the <i>Log4j Vulnerability Detection</i> solution from the Content hub.	1. Sign in to the Azure portal with your login credentials. 2. In the global search box, search for and select Microsoft Sentinel. A screenshot of the Microsoft Azure portal's search interface. The search bar at the top contains the text 'Microsoft Sentinel'. Below the search bar, a dropdown menu displays various search results categorized into 'Services', 'Marketplace', and 'Documentation'. The 'Microsoft Sentinel' service is highlighted with a red rectangular box. Other visible results include 'Microsoft Defender EASM', 'Microsoft Dev Box', 'Microsoft Fabric (preview)', 'Microsoft Defender for Endpoint', 'AWS IAM', 'Microsoft Defender for Office 365', 'Microsoft Sentinel Training Lab Solution', 'Microsoft Purview accounts', 'Microsoft Defender for Cloud', 'Microsoft Defender for IoT', 'Customer Lockbox for Microsoft Azure', 'Microsoft Sentinel and Microsoft 365 Defender SOC (MXDR)', 'Microsoft Defender for Identity solution for Sentinel', 'Okta Single Sign-On Solution', and 'Microsoft Purview Information Protection'. The 'Documentation' section lists several articles related to Microsoft Sentinel, such as 'Conduct end-to-end threat hunting with Hunts - Microsoft Sentinel' and 'Use matching analytics to detect threats - Microsoft Sentinel'.
